Allowable Subject Matter

Claims 1, 4-20, 22-24 are allowed.

Claims 1, 4-20, 22-24 are allowable over the prior art of record for at least the reason that even though the prior art discloses color display systems, wherein a holographic layer positioned before the liquid crystal display pixels is used to converge the various incident color lights onto the pixels such that light output from the pixels is widely diverging, the prior art fails to teach or reasonably suggest, regarding claims 1, 4-11, a color display optical system comprising a holographic grating positioned between the refractive lens and the imaging device to align the color components of light along paths that are normal to the plane of the imaging device, regarding claims 12-19, a color display optical system comprising a diffractive color dispersing layer positioned between the focusing element and the imaging plane to align the color

components of light along paths that are normal to the imaging plane at the pixel structures, and regarding claims 20, 22-24, a telecentric color filtering method for providing telecentric color-filtered light to an imaging plane of an electronic imaging device comprising directing the plural diverging color light components through the holographic grating so that all the color light components are normal to the imaging plane, as set forth by the claimed combination.
